

Never Pay for Another Cold Shower!

Monthly Operational Cost Comparison

Rinnai outperforms its competitors even in your monthly utility bills.

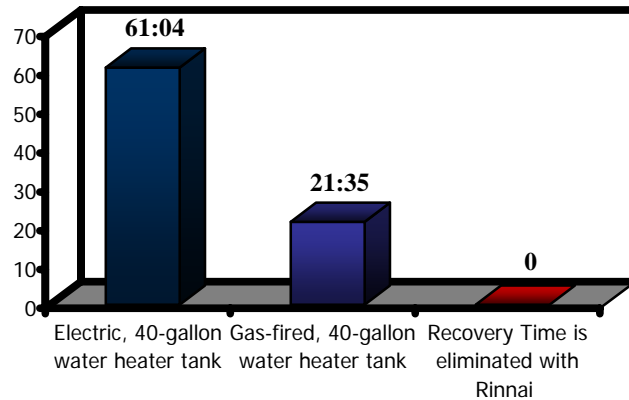

The Rinnai digital control pad allows users to set the hot water temperature limit to prevent scalding accidents as well as maintain consistent temperatures throughout your home.

The Rinnai units can be installed internally, externally or recessed. (External unit shown above).

Hot Water Recovery Time (Min: sec)

Recovery Time is the amount of time required for water to reheat to a useable temperature. Rinnai eliminates this time, as it never runs out of hot water.
